JOURNAL OF AIRCRAFT
Volume 40, No. 6, November–December 2003

2003 *Journal of Aircraft* Index

How to Use the Index

In the Subject Index, pages 1219–1223, each technical paper is listed under a maximum of three appropriate headings. Note the locating number in boldface type preceding each paper title, and use that number to find the paper in the Chronological Index. The Author Index, pages 1224–1225, lists all authors associated with a given technical paper. The locating numbers are identical to those in the Subject Index. The Chronological Index, pages 1226–1232, also lists all papers by their locating numbers. This listing contains titles, authors and their affiliations, and volume, issue number, and page where the paper appeared. It also gives the AIAA paper number, if any, on which the article was based, as well as the ISBN number if the paper was published in a bound collection of meetings papers. Comments, Replies, and Errata are listed directly beneath the paper to which they refer. If the paper to which they refer was published prior to 2003, that paper also will appear in both the Subject and Chronological Indexes. Authors of Comments also are listed in the Author Index.

Subject Index

Aircraft Technology, Conventional, STOL/VTOL

Aerodynamics (Aircraft)

C03-134 Active Transparent Stall Control System for Air Vehicles
C03-136 Advantages of a Bristled Wing as a Rotary Wing
C03-012 Aerodynamic and Aeroelastic Characteristics of Wings with Conformal Control Surfaces for Morphing Aircraft
C03-074 Aerooptical Design of a Long-Range Oblique Photography Pod
C03-091 Analytic Prediction of Surface Pressures over a Hemisphere-Cylinder at Incidence
C03-162 Benefit and Performance of Various Vortex Flap Configurations
C03-096 Boundary Condition for Simulation of Flow Over Porous Surfaces
C03-148 Calculation of Rotor Blade–Vortex Interaction Airloads Using a Multiple-Trailer Free-Wake Model
C03-017 Characteristics of Compressible Rectangular Cavity Flows
C03-125 Computational Simulation and Experimental Measurements for a Delta Wing with Periodic Suction and Blowing
C03-119 Data Summary from the First AIAA Computational Fluid Dynamics Drag Prediction Workshop
C03-101 Design Concepts for Adaptive Airfoils with Dynamic Transonic Flow Control
C03-105 Design of Low Reynolds Number Airfoils with Trips
C03-010 Dynamic Stall Alleviation Using a Deformable Leading Edge Concept–A Numerical Study
C03-083 Effect of a Trailing-Edge Jet on Fin Buffeting
C03-069 Effect of Leading-Edge Curvature on Airfoil Separation Control
C03-063 Evaluation of the Wright 1901 Glider Using Full-Scale Wind-Tunnel Data
C03-147 Experimental Investigation of Corotating Vortex Filaments in a Water Tunnel
C03-039 Experimental Studies on the Drag Reduction and Lift Enhancement of a Delta Wing
C03-057 Extending Slender Wing Theory to Not So Slender Wings
C03-042 Fuselage Shape Optimization of a Wing–Body Configuration with Nacelles
C03-126 High-Lift Devices for a Delta Wing Installed Around a Trailing-Edge
C03-071 Influences of Mounting Angles and Locations on the Effects of Gurney Flaps
C03-018 Investigation of Support Interference in High-Angle-of-Attack Testing
C03-137 Methods for Calculating the Subsonic Aerodynamic Center of Finite Wings
C03-029 Mixed Jameson/Total-Variation-Diminishing Scheme Applied to Simulating Rotor Airfoil Flowfield
C03-086 Natural-Laminar-Flow Airfoil Development for a Lightweight Business Jet
C03-120 Navier–Stokes Simulations for Transport Aircraft Wing/Body High-Lift Configurations
C03-084 Numerical Biobjective Optimal Design of Airfoil and Wing
C03-092 Numerical Simulation of Inviscid Incompressible Two-Dimensional Airfoil–Vortex Interaction in Ground Effect
C03-110 Optimum Downwash Behind Wings in Formation Flight
C03-054 Pitching-Moment Change Caused by High-Lift Devices on Wing-Body Configurations
C03-023 Robust Aeroelastic Stability Analysis Considering Frequency-Domain Aerodynamic Uncertainty
C03-085 Rollup and Near-Field Behavior of a Tip Vortex
C03-161 Roughness Implementation in FENSAP-ICE: Model Calibration and Influence on Ice Shapes
C03-031 Side Force on a Rough-Surface Ogive Cylinder: Effects of Freestream Turbulence
C03-058 Simple Engineering Model for Delta-Wing Vortex Breakdown
C03-152 Simulations of Mesoflap Control for Ramp-Generated Oblique Shock/Boundary-Layer Interactions
C03-050 Sonic Boom Alleviation Using Keel Configurations
C03-089 Stiffness Scaling for Solid-Cloth Parachutes
C03-036 Structured and Unstructured Computations on the DLR-F4 Wing–Body Configuration
C03-145 Design of Winglets For High-Performance Sailplanes
C03-067 Theoretical Solutions for Finite-Span Wings of Arbitrary Shapes Using Velocity Singularities
C03-019 Theoretical Solutions for Unsteady Flows Past Oscillating Flexible Airfoils Using Velocity Singularities
C03-073 Thrust Generation Caused by Flapping Airfoils in a Biplane Configuration
C03-026 Trajectory Analyses of External Store Separation by Using the Euler Equations
C03-107 Transitional Flow Modeling and Application to High-Lift Muti-Element Airfoil Configurations
C03-149 Transonic Cavity-Convex Corner Interactions
C03-151 Vortex Generator Installation Drag on an Airplane Near Its Cruise Condition
C03-041 Wind-Tunnel Study on a 65-deg Delta Wing at Sideslip

Aeroelasticity and Aeroservoelasticity

C03-079 Aeroelastic Wing with Leading- and Trailing-Edge Control Surfaces
C03-142 Aeroelasticity of Nonconventional Airplane Configurations–Past and Present
C03-114 Aeroelasticity Research at Wright-Patterson Air Force Base (Wright Field) from 1953–1993
C03-082 Aileron Buzz Simulation Using an Implicit Multiblock Aeroelastic Solver
C03-078 Analysis of Nonlinear Aeroelastic Signals
C03-112 Analytical Prediction of Panel Flutter Using Unsteady Potential Flow
C03-056 Analytical Representation of Aerodynamic Forces in Laplace Domain
C03-024 Comparison of Static and Dynamic Neural Networks for Limit Cycle Oscillation Prediction
C03-159 Computation of Limit Cycle Oscillations of a Delta Wing
C03-117 Computational Aeroelasticity: Success, Progress, Challenge
C03-028 Design and Testing of a Blended Wing Body Aeroelastic Wind-Tunnel Model
C03-076 Dynamic Aeroelastic Response of Aircraft Wings Modeled as Anisotropic Thin-Walled Beams
C03-132 Dynamic Deformation Measurements of an Aeroelastic Semispan Model
C03-081 Flight Testing with the Flutterometer
C03-038 From Fluttering Wings to Flapping Flight: The Energy Connection
C03-143 Future of Airplane Aeroelasticity
C03-075 Integrated Trim and Structural Design Process for Active Aeroelastic Wing Technology
C03-137 Methods for Calculating the Subsonic Aerodynamic Center of Finite Wings
C03-135 Navier–Stokes-Based Study into Linearity in Transonic Flow for Flutter Analysis
C03-022 Oscillating Turntable for the Measurement of Unsteady Aerodynamic Phenomena
C03-043 Parametric Study of Flutter for an Airfoil in Inviscid Transonic Flow
C03-113 Personal Perspective of Aeroelasticity During the Years 1953–1993
C03-047 Reduced-Order Modeling of an Elastic Panel in Transonic Flow
C03-023 Robust Aeroelastic Stability Analysis Considering Frequency-Domain Aerodynamic Uncertainty
C03-141 Rotary Wing Aeroelasticity–A Historical Perspective
C03-115 Transonic Dynamics Tunnel Aeroelastic Testing in Support of Aircraft Development

Air Transportation

C03-037 Air Cable Transport System
C03-033 Identification and Analysis of Key Barriers to the Utility of General Aviation

Civil Missions and Transportation

C03-033 Identification and Analysis of Key Barriers to the Utility of General Aviation
C03-066 Modeling the Mutual Distortions of Interacting Helicopter and Aircraft Wakes

Collision Avoidance

C03-150 Initial Efforts Toward Identifying Aviation Alerting System Dissonance

Configuration Design

C03-005 Constructal Theory: Tree-Shaped Flows and Energy Systems for Aircraft
C03-004 Decomposition in Energy System Synthesis/Design Optimization for Stationary and Aerospace Applications
C03-006 Exergy Approach to Decision-Based Design of Integrated Aircraft Thermal Systems
C03-154 Feasibility Study of Constant Eddy-Viscosity Assumption in Gradient-Based Design Optimization
C03-042 Fuselage Shape Optimization of a Wing–Body Configuration with Nacelles
C03-054 Pitching-Moment Change Caused by High-Lift Devices on Wing-Body Configurations
C03-087 Simultaneous Optimization of A Multiple-Aircraft Family
C03-145 Design of Winglets For High-Performance Sailplanes
C03-102 Wing Optimization Using Design of Experiment, Response Surface, and Data Fusion Methods

Deceleration Systems

C03-070 Six-Degree-of-Freedom Model of a Controlled Circular Parachute
C03-089 Stiffness Scaling for Solid-Cloth Parachutes

Economics

C03-037 Air Cable Transport System

Flight Mechanics

C03-056 Analytical Representation of Aerodynamic Forces in Laplace Domain
C03-061 Calculating Flight Paths of Not Necessarily Small Inclination
C03-121 Comparison of Generalized Approximate Cruise Range Solutions for Turbojet/Fan Aircraft
C03-137 Methods for Calculating the Subsonic Aerodynamic Center of Finite Wings
C03-146 Predicting the Contribution of Running Propellers to Aircraft Stability Derivatives
C03-127 Rotor-Wake Modeling for Simulation of Helicopter Flight Mechanics in Autorotation
C03-070 Six-Degree-of-Freedom Model of a Controlled Circular Parachute
C03-098 Stability Analysis of a Tethered Aerostat

Flight Operations

C03-032 Use of Individual Flight Corridors to Avoid Vortex Wakes

General Aviation

C03-037 Air Cable Transport System
C03-033 Identification and Analysis of Key Barriers to the Utility of General Aviation
C03-027 Sensitivity Analysis to a Forced Landing Maneuver

Ground Effect Machines

C03-099 Off-Surface Aerodynamic Measurements of a Wing in Ground Effect

Landing Dynamics

C03-027 Sensitivity Analysis to a Forced Landing Maneuver
C03-065 Vibration Control of a Landing Gear System Featuring Electrorheological/Magnetorheological Fluids

Lighter-Than-Air Systems

C03-098 Stability Analysis of a Tethered Aerostat

Micro Air Vehicles

C03-105 Design of Low Reynolds Number Airfoils with Trips

Military Missions

C03-004 Decomposition in Energy System Synthesis/Design Optimization for Stationary and Aerospace Applications
C03-062 Radar Cross Section Constraints in Flight-Path Optimization

Noise

C03-124 Component-Based Empirical Model for High-Lift System Noise Prediction
C03-026 Trajectory Analyses of External Store Separation by Using the Euler Equations
C03-053 Vibration Control Using Fuzzy-Logic-Based Active Damping

Performance

C03-061 Calculating Flight Paths of Not Necessarily Small Inclination
C03-121 Comparison of Generalized Approximate Cruise Range Solutions for Turbojet/Fan Aircraft
C03-005 Constructal Theory: Tree-Shaped Flows and Energy Systems for Aircraft
C03-008 Generalized Model for Vehicle Thermodynamic Loss Management
C03-145 Design of Winglets For High-Performance Sailplanes

Powerplant Integration

C03-042 Fuselage Shape Optimization of a Wing–Body Configuration with Nacelles
C03-007 Method for Propulsion Technology Impact Evaluation via Thermodynamic Work Potential

Propeller and Rotor Systems

C03-136 Advantages of a Bristled Wing as a Rotary Wing
C03-049 Dynamic Stall Control Using a Model-Based Observer
C03-029 Mixed Jameson/Total-Variation-Diminishing Scheme Applied to Simulating Rotor Airfoil Flowfield
C03-146 Predicting the Contribution of Running Propellers to Aircraft Stability Derivatives

Rotorcraft

C03-100 Active Control of Gimballed Rotors Using Swashplate Actuation During Shipboard Engagement Operations
C03-148 Calculation of Rotor Blade–Vortex Interaction Airloads Using a Multiple-Trailer Free-Wake Model
C03-021 Computer-Aided Assessment of Flight Simulator Fidelity
C03-029 Mixed Jameson/Total-Variation-Diminishing Scheme Applied to Simulating Rotor Airfoil Flowfield
C03-066 Modeling the Mutual Distortions of Interacting Helicopter and Aircraft Wakes
C03-122 Prediction of Tiltrotor Height–Velocity Diagrams Using Optimal Control Theory

C03-127 Rotor-Wake Modeling for Simulation of Helicopter Flight Mechanics in Autorotation
C03-141 Rotary Wing Aeroelasticity–A Historical Perspective
C03-065 Vibration Control of a Landing Gear System Featuring Electrorheological/Magnetorheological Fluids

Safety of Flight

C03-150 Initial Efforts Toward Identifying Aviation Alerting System Dissonance
C03-045 Probabilistic Two-Phase Wake Vortex Decay and Transport Model
C03-032 Use of Individual Flight Corridors to Avoid Vortex Wakes

Simulation

C03-021 Computer-Aided Assessment of Flight Simulator Fidelity
C03-027 Sensitivity Analysis to a Forced Landing Maneuver
C03-070 Six-Degree-of-Freedom Model of a Controlled Circular Parachute
C03-161 Roughness Implementation in FENSAP-ICE: Model Calibration and Influence on Ice Shapes

Stealth

C03-062 Radar Cross Section Constraints in Flight-Path Optimization

STOL/VTOL/STOVL

C03-126 High-Lift Devices for a Delta Wing Installed Around a Trailing-Edge
C03-011 Performance and Stability of Ducted-Fan Uninhabited Aerial Vehicle Model

Structural Design (Including Loads)

C03-028 Design and Testing of a Blended Wing Body Aeroelastic Wind-Tunnel Model
C03-144 Multidisciplinary Design Optimization of a Built-Up Wing Structure with a Tip Missile

System Effectiveness

C03-123 Joint Strike Fighter Integrated Subsystems Technology, a Demonstration for Industry, by Industry

Testing, Flight and Ground

C03-078 Analysis of Nonlinear Aeroelastic Signals
C03-020 Assessment of Mach Number Correction for Sidewall Interference in Transonic Airfoil Testing
C03-028 Design and Testing of a Blended Wing Body Aeroelastic Wind-Tunnel Model
C03-132 Dynamic Deformation Measurements of an Aeroelastic Semispan Model
C03-063 Evaluation of the Wright 1901 Glider Using Full-Scale Wind-Tunnel Data
C03-081 Flight Testing with the Flutterometer
C03-018 Investigation of Support Interference in High-Angle-of-Attack Testing
C03-022 Oscillating Turntable for the Measurement of Unsteady Aerodynamic Phenomena

Uninhabited and Unmanned Air Vehicles

C03-105 Design of Low Reynolds Number Airfoils with Trips

Vibration

C03-078 Analysis of Nonlinear Aeroelastic Signals
C03-141 Rotary Wing Aeroelasticity–A Historical Perspective
C03-065 Vibration Control of a Landing Gear System Featuring Electrorheological/Magnetorheological Fluids
C03-053 Vibration Control Using Fuzzy-Logic-Based Active Damping

Energy

Conservation

C03-005 Constructal Theory: Tree-Shaped Flows and Energy Systems for Aircraft

Fluid Dynamics

Aeroacoustics

C03-017 Characteristics of Compressible Rectangular Cavity Flows
C03-124 Component-Based Empirical Model for High-Lift System Noise Prediction

Boundary-Layer Stability and Transition

C03-134 Active Transparent Stall Control System for Air Vehicles
C03-107 Transitional Flow Modeling and Application to High-Lift Muti-Element Airfoil Configurations

Computational Fluid Dynamics

C03-096 Boundary Condition for Simulation of Flow Over Porous Surfaces
C03-125 Computational Simulation and Experimental Measurements for a Delta Wing with Periodic Suction and Blowing
C03-119 Data Summary from the First AIAA Computational Fluid Dynamics Drag Prediction Workshop
C03-010 Dynamic Stall Alleviation Using a Deformable Leading Edge Concept–A Numerical Study
C03-013 Inviscid Computation of Effect of Wake Vortices on a Scale-Model Airplane
C03-086 Natural-Laminar-Flow Airfoil Development for a Lightweight Business Jet
C03-120 Navier–Stokes Simulations for Transport Aircraft Wing/Body High-Lift Configurations
C03-084 Numerical Biobjective Optimal Design of Airfoil and Wing
C03-161 Roughness Implementation in FENSAP-ICE: Model Calibration and Influence on Ice Shapes
C03-152 Simulations of Mesoflap Control for Ramp-Generated Oblique Shock/Boundary-Layer Interactions
C03-050 Sonic Boom Alleviation Using Keel Configurations
C03-036 Structured and Unstructured Computations on the DLR-F4 Wing–Body Configuration
C03-073 Thrust Generation Caused by Flapping Airfoils in a Biplane Configuration
C03-026 Trajectory Analyses of External Store Separation by Using the Euler Equations
C03-107 Transitional Flow Modeling and Application to High-Lift Muti-Element Airfoil Configurations
C03-102 Wing Optimization Using Design of Experiment, Response Surface, and Data Fusion Methods

Jets, Wakes, and Viscid-Inviscid Flow Interactions

C03-099 Off-Surface Aerodynamic Measurements of a Wing in Ground Effect
C03-032 Use of Individual Flight Corridors to Avoid Vortex Wakes

Separated Flows

C03-069 Effect of Leading-Edge Curvature on Airfoil Separation Control
C03-039 Experimental Studies on the Drag Reduction and Lift Enhancement of a Delta Wing
C03-031 Side Force on a Rough-Surface Ogive Cylinder: Effects of Freestream Turbulence
C03-149 Transonic Cavity-Convex Corner Interactions
C03-041 Wind-Tunnel Study on a 65-deg Delta Wing at Sideslip

Subsonic Flow

C03-091 Analytic Prediction of Surface Pressures over a Hemisphere-Cylinder at Incidence
C03-039 Experimental Studies on the Drag Reduction and Lift Enhancement of a Delta Wing
C03-057 Extending Slender Wing Theory to Not So Slender Wings
C03-071 Influences of Mounting Angles and Locations on the Effects of Gurney Flaps
C03-025 Multifaceted Influence of Fuselage Geometry on Delta-Wing Aerodynamics
C03-067 Theoretical Solutions for Finite-Span Wings of Arbitrary Shapes Using Velocity Singularities

Supersonic Flow

C03-152 Simulations of Mesoflap Control for Ramp-Generated Oblique Shock/Boundary-Layer Interactions
C03-050 Sonic Boom Alleviation Using Keel Configurations

Transonic Flow

C03-020 Assessment of Mach Number Correction for Sidewall Interference in Transonic Airfoil Testing
C03-017 Characteristics of Compressible Rectangular Cavity Flows
C03-101 Design Concepts for Adaptive Airfoils with Dynamic Transonic Flow Control
C03-135 Navier–Stokes-Based Study into Linearity in Transonic Flow for Flutter Analysis
C03-047 Reduced-Order Modeling of an Elastic Panel in Transonic Flow
C03-036 Structured and Unstructured Computations on the DLR-F4 Wing–Body Configuration
C03-149 Transonic Cavity-Convex Corner Interactions

Unsteady Flows

C03-056 Analytical Representation of Aerodynamic Forces in Laplace Domain
C03-159 Computation of Limit Cycle Oscillations of a Delta Wing
C03-117 Computational Aeroelasticity: Success, Progress, Challenge
C03-101 Design Concepts for Adaptive Airfoils with Dynamic Transonic Flow Control
C03-076 Dynamic Aeroelastic Response of Aircraft Wings Modeled as Anisotropic Thin-Walled Beams

C03-010 Dynamic Stall Alleviation Using a Deformable Leading Edge Concept–A Numerical Study
C03-049 Dynamic Stall Control Using a Model-Based Observer
C03-083 Effect of a Trailing-Edge Jet on Fin Buffeting
C03-069 Effect of Leading-Edge Curvature on Airfoil Separation Control
C03-038 From Fluttering Wings to Flapping Flight: The Energy Connection
C03-025 Multifaceted Influence of Fuselage Geometry on Delta-Wing Aerodynamics
C03-135 Navier–Stokes-Based Study into Linearity in Transonic Flow for Flutter Analysis
C03-092 Numerical Simulation of Inviscid Incompressible Two-Dimensional Airfoil–Vortex Interaction in Ground Effect
C03-022 Oscillating Turntable for the Measurement of Unsteady Aerodynamic Phenomena
C03-048 Parallelized Three-Dimensional Unstructured Euler Solver for Unsteady Aerodynamics
C03-043 Parametric Study of Flutter for an Airfoil in Inviscid Transonic Flow
C03-089 Stiffness Scaling for Solid-Cloth Parachutes
C03-073 Thrust Generation Caused by Flapping Airfoils in a Biplane Configuration
C03-115 Transonic Dynamics Tunnel Aeroelastic Testing in Support of Aircraft Development

Vortices

C03-125 Computational Simulation and Experimental Measurements for a Delta Wing with Periodic Suction and Blowing
C03-097 Correlation Between Vortex Strength and Axial Velocity in a Trailing Vortex
C03-083 Effect of a Trailing-Edge Jet on Fin Buffeting
C03-147 Experimental Investigation of Corotating Vortex Filaments in a Water Tunnel
C03-126 High-Lift Devices for a Delta Wing Installed Around a Trailing-Edge
C03-018 Investigation of Support Interference in High-Angle-of-Attack Testing
C03-013 Inviscid Computation of Effect of Wake Vortices on a Scale-Model Airplane
C03-025 Multifaceted Influence of Fuselage Geometry on Delta-Wing Aerodynamics
C03-092 Numerical Simulation of Inviscid Incompressible Two-Dimensional Airfoil–Vortex Interaction in Ground Effect
C03-099 Off-Surface Aerodynamic Measurements of a Wing in Ground Effect
C03-045 Probabilistic Two-Phase Wake Vortex Decay and Transport Model
C03-085 Rollup and Near-Field Behavior of a Tip Vortex
C03-058 Simple Engineering Model for Delta-Wing Vortex Breakdown
C03-041 Wind-Tunnel Study on a 65-deg Delta Wing at Sideslip

Guidance, Control, And Dynamics Technology

Aircraft Dynamics

C03-106 Experimental Analysis and Modeling of Limit Cycles In a Dynamic Wind-Tunnel Rig
C03-011 Performance and Stability of Ducted-Fan Uninhabited Aerial Vehicle Model
C03-127 Rotor-Wake Modeling for Simulation of Helicopter Flight Mechanics in Autorotation

Aircraft Stability and Control

C03-134 Active Transparent Stall Control System for Air Vehicles
C03-079 Aeroelastic Wing with Leading- and Trailing-Edge Control Surfaces
C03-013 Inviscid Computation of Effect of Wake Vortices on a Scale-Model Airplane
C03-146 Predicting the Contribution of Running Propellers to Aircraft Stability Derivatives
C03-098 Stability Analysis of a Tethered Aerostat

Artificial Intelligence

C03-024 Comparison of Static and Dynamic Neural Networks for Limit Cycle Oscillation Prediction

Autonomous Vehicles

C03-011 Performance and Stability of Ducted-Fan Uninhabited Aerial Vehicle Model

Control System Design

C03-100 Active Control of Gimballed Rotors Using Swashplate Actuation During Shipboard Engagement Operations
C03-049 Dynamic Stall Control Using a Model-Based Observer

Flight Mechanics

C03-106 Experimental Analysis and Modeling of Limit Cycles In a Dynamic Wind-Tunnel Rig

Handling Qualities

C03-021 Computer-Aided Assessment of Flight Simulator Fidelity
C03-066 Modeling the Mutual Distortions of Interacting Helicopter and Aircraft Wakes

Information Processing

C03-150 Initial Efforts Toward Identifying Aviation Alerting System Dissonance

Missile Dynamics

C03-031 Side Force on a Rough-Surface Ogive Cylinder: Effects of Freestream Turbulence

Optimization Techniques

C03-133 Bilevel Design of a Wing Structure Using Response Surfaces
C03-122 Prediction of Tiltrotor Height–Velocity Diagrams Using Optimal Control Theory

System Identification

C03-106 Experimental Analysis and Modeling of Limit Cycles In a Dynamic Wind-Tunnel Rig

Interdisciplinary Topics

Analytical and Numerical Methods

C03-061 Calculating Flight Paths of Not Necessarily Small Inclination
C03-129 Compact Methodology for Computing Limit-Cycle Oscillations in Aeroelasticity
C03-035 Flow Angle, Temperature, and Aerodynamic Damping on Supersonic Panel Flutter Stability Boundary
C03-095 Nonlinear Random Response of Panels in an Elevated Thermal-Acoustic Environment

Atmospheric and Space Sciences

C03-086 Natural-Laminar-Flow Airfoil Development for a Lightweight Business Jet

Environmental Effects

C03-034 FENSAP-ICE's Three-Dimensional In-Flight Ice Accretion Module: ICE3D
C03-086 Natural-Laminar-Flow Airfoil Development for a Lightweight Business Jet
C03-045 Probabilistic Two-Phase Wake Vortex Decay and Transport Model

Multidisciplinary Design Optimization

C03-004 Decomposition in Energy System Synthesis/Design Optimization for Stationary and Aerospace Applications
C03-006 Exergy Approach to Decision-Based Design of Integrated Aircraft Thermal Systems
C03-123 Joint Strike Fighter Integrated Subsystems Technology, a Demonstration for Industry, by Industry
C03-144 Multidisciplinary Design Optimization of a Built-Up Wing Structure with a Tip Missile
C03-084 Numerical Biobjective Optimal Design of Airfoil and Wing
C03-156 Optimization of a Wing Structure for Gust Response and Aileron Effectiveness
C03-062 Radar Cross Section Constraints in Flight-Path Optimization
C03-003 Rational Objective Functions for Vehicles
C03-102 Wing Optimization Using Design of Experiment, Response Surface, and Data Fusion Methods

Reliability, Maintainability, and Logistics Support

C03-123 Joint Strike Fighter Integrated Subsystems Technology, a Demonstration for Industry, by Industry

Launch Vehicle And Missile (lv/m) Technology

Aerodynamics (Spacecraft)

C03-057 Extending Slender Wing Theory to Not So Slender Wings
C03-009 F-16/SPICE Separation Analysis - Summary of the Risk-Reduction Phase Program
C03-048 Parallelized Three-Dimensional Unstructured Euler Solver for Unsteady Aerodynamics

Simulation

C03-009 F-16/SPICE Separation Analysis - Summary of the Risk-Reduction Phase Program

Testing, Flight and Ground

C03-009 F-16/SPICE Separation Analysis - Summary of the Risk-Reduction Phase Program

Propulsion And Power

Airbreathing Propulsion

C03-007 Method for Propulsion Technology Impact Evaluation via Thermodynamic Work Potential

Engine Performance

C03-008 Generalized Model for Vehicle Thermodynamic Loss Management
C03-007 Method for Propulsion Technology Impact Evaluation via Thermodynamic Work Potential

Structural Mechanics And Materials

Aeroelasticity and Control

C03-012 Aerodynamic and Aeroelastic Characteristics of Wings with Conformal Control Surfaces for Morphing Aircraft
C03-079 Aeroelastic Wing with Leading- and Trailing-Edge Control Surfaces
C03-142 Aeroelasticity of Nonconventional Airplane Configurations–Past and Present
C03-114 Aeroelasticity Research at Wright-Patterson Air Force Base (Wright Field) from 1953–1993
C03-129 Compact Methodology for Computing Limit-Cycle Oscillations in Aeroelasticity
C03-024 Comparison of Static and Dynamic Neural Networks for Limit Cycle Oscillation Prediction
C03-159 Computation of Limit Cycle Oscillations of a Delta Wing
C03-138 Effects of Parametric Uncertainty on Airfoil Limit Cycle Oscillation
C03-081 Flight Testing with the Flutterometer
C03-035 Flow Angle, Temperature, and Aerodynamic Damping on Supersonic Panel Flutter Stability Boundary
C03-038 From Fluttering Wings to Flapping Flight: The Energy Connection
C03-143 Future of Airplane Aeroelasticity
C03-043 Parametric Study of Flutter for an Airfoil in Inviscid Transonic Flow
C03-113 Personal Perspective of Aeroelasticity During the Years 1953–1993
C03-156 Optimization of a Wing Structure for Gust Response and Aileron Effectiveness
C03-115 Transonic Dynamics Tunnel Aeroelastic Testing in Support of Aircraft Development

Dynamic Model Analysis

C03-095 Nonlinear Random Response of Panels in an Elevated Thermal-Acoustic Environment

Flexible and Active Structures

C03-012 Aerodynamic and Aeroelastic Characteristics of Wings with Conformal Control Surfaces for Morphing Aircraft
C03-075 Integrated Trim and Structural Design Process for Active Aeroelastic Wing Technology
C03-053 Vibration Control Using Fuzzy-Logic-Based Active Damping

Materials Structural Properties

C03-158 Modeling Thermal Residual Stresses in Composite Patch Repairs During Multitemperature Bonding Cycles

Structural Composite Materials

C03-131 Aging Effects on the Interlaminar Shear Strength of High-Performance Composites
C03-158 Modeling Thermal Residual Stresses in Composite Patch Repairs During Multitemperature Bonding Cycles
C03-157 Structural Response and Failure of a Full-Scale Stitched Graphite-Epoxy Wing

Structural Design

C03-133 Bilevel Design of a Wing Structure Using Response Surfaces
C03-144 Multidisciplinary Design Optimization of a Built-Up Wing Structure with a Tip Missile

Structural Durability (Including Fatigue, Fracture, and Environmental Degradation)

C03-158 Modeling Thermal Residual Stresses in Composite Patch Repairs During Multitemperature Bonding Cycles
C03-095 Nonlinear Random Response of Panels in an Elevated Thermal-Acoustic Environment

Structural Dynamics and Characterization

C03-129 Compact Methodology for Computing Limit-Cycle Oscillations in Aeroelasticity
C03-138 Effects of Parametric Uncertainty on Airfoil Limit Cycle Oscillation

Structural Finite Elements

C03-157 Structural Response and Failure of a Full-Scale Stitched Graphite-Epoxy Wing

Structural Modeling

C03-076 Dynamic Aeroelastic Response of Aircraft Wings Modeled as Anisotropic Thin-Walled Beams

Structural Optimization

C03-133 Bilevel Design of a Wing Structure Using Response Surfaces
C03-075 Integrated Trim and Structural Design Process for Active Aeroelastic Wing Technology
C03-156 Optimization of a Wing Structure for Gust Response and Aileron Effectiveness

Structural Stability

C03-023 Robust Aeroelastic Stability Analysis Considering Frequency-Domain Aerodynamic Uncertainty

Thermal Effects

C03-131 Aging Effects on the Interlaminar Shear Strength of High-Performance Composites
C03-035 Flow Angle, Temperature, and Aerodynamic Damping on Supersonic Panel Flutter Stability Boundary

Thermophysics And Heat Transfer

Aerothermodynamics/Thermal Protection

C03-153 Experimental Frossling Numbers for Ice-Roughened NACA 0012 Airfoils

Forced Convection

C03-153 Experimental Frossling Numbers for Ice-Roughened NACA 0012 Airfoils

Laser Interaction

C03-067 Theoretical Solutions for Finite-Span Wings of Arbitrary Shapes Using Velocity Singularities

Thermal Modeling and Analysis

C03-006 Exergy Approach to Decision-Based Design of Integrated Aircraft Thermal Systems
C03-153 Experimental Frossling Numbers for Ice-Roughened NACA 0012 Airfoils

Chronological Index

C01-099 Review of Attitude Representations Used for Aircraft Kinematics. W. F. Phillips and C. E. Hailey, *Utah State University*; and G. A. Gebert, *Sverdrup Technology, Inc.* (**38**, 4, p.718)
Errata (**40**, 1, p. 223)

C02-109 Computational-Fluid-Dynamics Based Advaced Ship-Airwake Databasae for Helicopter Flight Simulation.
Technical Comment. Steven Zan, *National Research Council of Canada, Canada* (**40**, 5, p. 1007)

C03-001 Proposed System-Level Multidisciplinary Analysis Technique Based on Exergy Methods. David J. Moorhouse, *Air Force Research Laboratory* (**40**, 1, p. 11) Article

C03-002 Optimization of an Aircraft Power Distribution Subsystem. S. Chandrasekaran, S. A. Ragon, D. K. Lindner, Z. Gürdal, and D. Boroyevich, *Virginia Polytechnic Institute and State University* (**40**, 1, p. 16) Article

C03-003 Rational Objective Functions for Vehicles. David Paulus Jr. and Richard Gaggioli, *Marquette University* (**40**, 1, p. 27) Article

C03-004 Decomposition in Energy System Synthesis/Design Optimization for Stationary and Aerospace Applications. Jules Ricardo Muñoz, *United Technologies Research Center*; and Michael R. von Spakovsky, *Virginia Polytechnic Institute and State University* (**40**, 1, p. 35) Article based on AIAA Paper 2000-4853

C03-005 Constructal Theory: Tree-Shaped Flows and Energy Systems for Aircraft. Adrian Bejan, *Duke University* (**40**, 1, p. 43) Article based on AIAA Paper 2000-4855

C03-006 Exergy Approach to Decision-Based Design of Integrated Aircraft Thermal Systems. R. S. Figliola, *Clemson University*; R. Tipton, *Lockheed Martin Aeronautics*; and H. Li, *Clemson University* (**40**, 1, p. 49) Article

C03-007 Method for Propulsion Technology Impact Evaluation via Thermodynamic Work Potential. Bryce Roth and Dimitri Mavris, *Georgia Institute of Technology* (**40**, 1, p. 56) Article based on AIAA Paper 2000-4854

C03-008 Generalized Model for Vehicle Thermodynamic Loss Management. Bryce A. Roth and Dimitri N. Mavris, *Georgia Institute of Technology* (**40**, 1, p. 62) Article

C03-009 F-16/SPICE Separation Analysis - Summary of the Risk-Reduction Phase Program. Y. Sadeh and V. A. Gaton, *RAFAEL, Armament Development Authority Ltd., Israel* (**40**, 1, p. 70) Article based on AIAA Paper 2001-0260

C03-010 Dynamic Stall Alleviation Using a Deformable Leading Edge Concept–A Numerical Study. Mehmet Sahin and Lakshmi N. Sankar, *Georgia Institute of Technology*; M. S. Chandrasekhara, *Naval Postgraduate School*; and Chee Tung, *NASA Ames Research Center* (**40**, 1, p. 77) ARTICLE based on AIAA Paper 2000-0520

C03-011 Performance and Stability of Ducted-Fan Uninhabited Aerial Vehicle Model. Giulio Avanzini and Salvatore D'Angelo, *Politecnico di Torino, Italy*; and Guido de Matteis, *University of Rome "La Sapienza," Italy* (**40**, 1, p. 86) Article

C03-012 Aerodynamic and Aeroelastic Characteristics of Wings with Conformal Control Surfaces for Morphing Aircraft. B. Sanders, *U.S. Air Force Research Laboratory*; F. E. Eastep, *University of Dayton*; and E. Forster, *U.S. Air Force Research Laboratory* (**40**, 1, p. 94) Article based on AIAA Paper 2001-1211

C03-013 Inviscid Computation of Effect of Wake Vortices on a Scale-Model Airplane. R. Struijs, G. Jonville, D. Darracq, and R. Heinrich, *CERFACS, France* (**40**, 1, p. 100) Article

C03-014 Compressibility and Excitation Location Effects on High Reynolds Numbers Active Separation Control. Avi Seifert, *Tel-Aviv University, Israel*; and LaTunia G. Pack, *NASA Langley Research Center* (**40**, 1, p. 110) Article

C03-015 Effects of Sweep on Active Separation Control at High Reynolds Numbers. Avi Seifert, *Tel-Aviv University, Israel*; and LaTunia G. Pack, *NASA Langley Research Center* (**40**, 1, p. 120) Article

C03-016 Validation of a Simulation Model for a Planetary Entry Capsule. Giorgio Guglieri and Fulvia Quagliotti, *Politecnico di Torino, Italy* (**40**, 1, p. 127) Article

C03-017 Characteristics of Compressible Rectangular Cavity Flows. K. Chung, *National Cheng Kung University, Taiwan, ROC* (**40**, 1, p. 137) Article

C03-018 Investigation of Support Interference in High-Angle-of-Attack Testing. G. S. Taylor and I. Gursul, *University of Bath, England, UK*; and D. I. Greenwell, *University of Bristol, England, UK* (**40**, 1, p. 143) Article

C03-019 Theoretical Solutions for Unsteady Flows Past Oscillating Flexible Airfoils Using Velocity Singularities. D. Mateescu and M. Abdo, *McGill University, Canada* (**40**, 1, p. 153) Article

C03-020 Assessment of Mach Number Correction for Sidewall Interference in Transonic Airfoil Testing. Norikazu Sudani, Mamoru Sato, Hiroshi Kanda, Nobuhiro Toda, and Masashi Shigemi, *National Aerospace Laboratory of Japan, Japan* (**40**, 1, p. 164) Article based on AIAA Paper 2001-2423

C03-021 Computer-Aided Assessment of Flight Simulator Fidelity. Y. Zeyada and R. A. Hess, *University of California* (**40**, 1, p. 173) Article

C03-022 Oscillating Turntable for the Measurement of Unsteady Aerodynamic Phenomena. David J. Piatak and Craig S. Cleckner, *NASA Langley Research Center* (**40**, 1, p. 181) Article based on AIAA Paper 2002-0171

C03-023 Robust Aeroelastic Stability Analysis Considering Frequency-Domain Aerodynamic Uncertainty. Dan Borglund, *Kungliga Tekniska Hogskolan, Sweden* (**40**, 1, p. 189) Article based on AIAA Paper 2002-1716

C03-024 Comparison of Static and Dynamic Neural Networks for Limit Cycle Oscillation Prediction. Michael R. Johnson and Charles M. Denegri, Jr., *Air Force SEEK EAGLE Office* (**40**, 1, p. 194) Article based on AIAA Paper 2001-1289

C03-025 Multifaceted Influence of Fuselage Geometry on Delta-Wing Aerodynamics. Lars E. Ericsson (**40**, 1, p. 204) Engineering Note

C03-026 Trajectory Analyses of External Store Separation by Using the Euler Equations. Jenn-Long Liu, *Leader University, Taiwan, ROC* (**40**, 1, p. 206) Engineering Note

C03-027 Sensitivity Analysis to a Forced Landing Maneuver. Peter Tong, *Royal Melbourne Institute of Technology, Australia*; George Galanis, *Defence Science and Technology Organisation, Australia*; and Cees Bil, *Royal Melbourne Institute of Technology, Australia* (**40**, 1, p. 208) Engineering Note

C03-028 Design and Testing of a Blended Wing Body Aeroelastic Wind-Tunnel Model. Martin Carlsson and Jakob Kuttenkeuler, *Kungliga Tekniska Hogskolan, Sweden* (**40**, 1, p. 211) Engineering Note

C03-029 Mixed Jameson/Total-Variation-Diminishing Scheme Applied to Simulating Rotor Airfoil Flowfield. Y. Cao, J. Wang, and Y. Su, *Beijing University of Aeronautics and Astronautics, ROC* (**40**, 1, p. 213) Engineering Note

C03-030 Rotation of a Rectangular Jet by Periodic Excitation. E. Avihar, N. Shemesh, and A. Seifert, *Tel-Aviv University, Israel*; and L. G. Pack, *NASA Langley Research Center* (**40**, 1, p. 217) Engineering Note

C03-031 Side Force on a Rough-Surface Ogive Cylinder: Effects of Freestream Turbulence. K. B. Lua and S. C. Luo, *National University of Singapore, Singapore*; and E. K. R. Goh, *DSO National Laboratories, Singapore* (**40**, 1, p. 219) Engineering Note

C03-032 Use of Individual Flight Corridors to Avoid Vortex Wakes. Vernon J. Rossow, *NASA Ames Research Center* (**40**, 2, p. 225) Article based on AIAA Paper 2002-4874

C03-033 Identification and Analysis of Key Barriers to the Utility of General Aviation. Troy D. Downen and R. John Hansman Jr., *Massachusetts Institute of Technology* (**40**, 2, p. 232) Article

C03-034 FENSAP-ICE's Three-Dimensional In-Flight Ice Accretion Module: ICE3D. Heloise Beaugendre, Francois Morency, and Wagdi G. Habashi, *McGill University, Canada* (**40**, 2, p. 239) Article based on AIAA Paper 2002-385

C03-035 Flow Angle, Temperature, and Aerodynamic Damping on Supersonic Panel Flutter Stability Boundary. Guangfeng Cheng, *Old Dominion University*; Y. Y. Lee, *City University of Hong Kong, ROC*; and Chuh Mei, *Old Dominion University* (**40**, 2, p. 248) Article

C03-036 Structured and Unstructured Computations on the DLR-F4 Wing–Body Configuration. M. Rakowitz, B. Eisfeld, and D. Schwamborn, *DLR, Institute of Aerodynamics and Flow Technology, Germany*; and M. Sutcliffe, *Airbus Deutschland GmbH, Germany* (**40**, 2, p. 256) Article based on AIAA Paper 2002-0837

C03-037 Air Cable Transport System. Alexander Bolonkin, *U.S. Air Force Research Laboratory* (**40**, 2, p. 265) Article

C03-038 From Fluttering Wings to Flapping Flight: The Energy Connection. Mayuresh J. Patil, *Widener University* (**40**, 2, p. 270) Article based on AIAA Paper 2001-1460

C03-039 Experimental Studies on the Drag Reduction and Lift Enhancement of a Delta Wing. Yachen Li and Jinjun Wang, *Beijing University of Aeronautics and Astronautics, ROC* (**40**, 2, p. 277) Article

C03-040 Method for Designing Leading-Edge Fillets to Eliminate Flow Separation. Bradford E. Green and John L. Whitesides, *The George Washington University* (**40**, 2, p. 282) Article

C03-041 Wind-Tunnel Study on a 65-deg Delta Wing at Sideslip. N. G. Verhaagen, *Delft University of Technology, The Netherlands*; and C. E. Jobe, *U.S. Air Force Research Laboratory* (**40**, 2, p. 290) Article

C03-042 Fuselage Shape Optimization of a Wing–Body Configuration with Nacelles. Yoshikazu Makino and Toshiyuki Iwamiya, *National Aerospace Laboratory, Japan*; and Zhong Lei, *VINAS Co., Ltd,, Japan* (**40**, 2, p. 297) Article based on AIAA Paper 2001-2447

C03-043 Parametric Study of Flutter for an Airfoil in Inviscid Transonic Flow. Denis B. Kholodar, Jeffrey P. Thomas, Earl H. Dowell, and Kenneth C. Hall, *Duke University* (**40**, 2, p. 303) Article

C03-044 Blunt Body in Hypersonic Electromagnetic Flow Field. J. S. Shang, J. Hayes, J. Menart, and J. Miller, *U.S. Air Force Research Laboratory* (**40**, 2, p. 314) Article

C03-045 Probabilistic Two-Phase Wake Vortex Decay and Transport Model. Frank Holzäpfel, *German Aerospace Center (DLR), Oberpfaffenhofen, Germany* (**40**, 2, p. 323) Article

C03-046 Influence of Trailing–Edge Flow Control on Airfoil Performance. S. L. Gai and R. Palfrey *Australian Defence Force Academy, Australia* (**40**, 2, p. 332) Article

C03-047 Reduced-Order Modeling of an Elastic Panel in Transonic Flow. David J. Lucia, *Air Force Institute of Technology*; Philip S. Beran, *U.S. Air Force Research Laboratory*; and Paul I. King, *Air Force Institute of Technology* (**40**, 2, p. 338) Article

C03-048 Parallelized Three-Dimensional Unstructured Euler Solver for Unsteady Aerodynamics. Erdal Oktay, *Roketsan, Missiles Industries, Inc., Turkey*; Hasan U. Akay and Ali Uzun, *Indiana University–Purdue University Indianapolis* (**40**, 2, p. 348) Article based on AIAA Paper 2002-0107

C03-049 Dynamic Stall Control Using a Model-Based Observer. John Magill, Matthew Bachmann, and Greg Rixon, *Physical Sciences Inc.*; and Keith McManus, *GE Corporate Research and Development Center* (**40**, 2, p. 355) Article

C03-050 Sonic Boom Alleviation Using Keel Configurations. Frank Marconi, *Allied Aerospace Industries*; Rodney D.W. Bowersox, *Texas A&M University*; and Joseph A. Schetz, *Virginia Polytechnic Institute and State University* (**40**, 2, p. 363) Article

C03-051 New Model of Decelerating Bluff-Body Drag. J. Potvin, G. Peek, and B. Brocato, *Saint Louis University* (**40**, 2, p. 370) Article

C03-052 Comparison of Lot-Sizing Methods in Aircraft Repairable Component Inventory Systems. Adel A. Ghobbar and Chris H. Friend, *City University London, England, UK*; and Louise A. Swift, *University of East Anglia, England, UK* (**40**, 2, p. 378) Article

C03-053 Vibration Control Using Fuzzy-Logic-Based Active Damping. Kelly Cohen, Joseph Z. Ben-Asher, and Tanchum Weller, *Technion–Israel Institute of Technology, Israel* (**40**, 2, p. 384) Article

C03-054 Pitching-Moment Change Caused by High-Lift Devices on Wing-Body Configurations. Gerard W. H. van Es, *The Netherlands* (**40**, 2, p. 391) Engineering Note

C03-055 Euler Solutions for a Medium-Range Cargo Aircraft. Cengizhan Bahar, Nafiz Alemdaroglu, and Yusuf Özyörük, *Middle East Technical University, Turkey*; and Emre Temel, *Aselsan, Inc., Turkey* (**40**, 2, p. 393) Engineering Note based on AIAA Paper 2002-0402

C03-056 Analytical Representation of Aerodynamic Forces in Laplace Domain. Bertil A. Winther, *The Boeing Company* (**40**, 2, p. 395) Engineering Note

C03-057 Extending Slender Wing Theory to Not So Slender Wings. Lance W. Traub, *Texas A&M University* (**40**, 2, p. 399) Engineering Note

C03-058 Simple Engineering Model for Delta-Wing Vortex Breakdown. D. I. Greenwell, *University of Bristol, England, UK* (**40**, 2, p. 402) Engineering Note

C03-059 Intensification of Aircraft Wake Vortices in Crosswind Shear. M. Mokry, *National Research Council, Canada* (**40**, 2, p. 405) Engineering Note

C03-060 Effect of Leading-Edge Cross-Sectional Shape on Nonslender Wing Rock. Lars E. Ericsson (**40**, 2, p. 407) Engineering Note

C03-061 Calculating Flight Paths of Not Necessarily Small Inclination. John T. Lowry, *Flight Physics* (**40**, 2, p. 410) Engineering Note

C03-062 Radar Cross Section Constraints in Flight-Path Optimization. Martin Norsell, *Royal Institute of Technology, Sweden* (**40**, 2, p. 412) Engineering Note

C03-063 Evaluation of the Wright 1901 Glider Using Full-Scale Wind-Tunnel Data. Kevin Kochersberger, *Rochester Institute of Technology*; Robert Ash, Colin Britcher, and Drew Landman, *Old Dominion University*; and Ken Hyde, *The Wright Experience* (**40**, 3, p. 417) Article

C03-064 Far-Field Drag-Prediction Technique Applied to Wing Design for Civil Aircraft. Jie Li, Fengwei Li, and Qin E, *Northwestern Polytechnical University, ROC* (**40**, 3, p. 425) Article

C03-065 Vibration Control of a Landing Gear System Featuring Electrorheological/Magnetorheological Fluids. Young-Tai Choi and Norman M. Wereley, *University of Maryland* (**40**, 3, p. 432) Article

C03-066 Modeling the Mutual Distortions of Interacting Helicopter and Aircraft Wakes. G. R. Whitehouse and R. E. Brown, *Imperial College, England, UK* (**40**, 3, p. 440) Article

C03-067 Theoretical Solutions for Finite-Span Wings of Arbitrary Shapes Using Velocity Singularities. D. Mateescu, J. F. Seytre, and A. M. Berhe, *McGill University, Canada* (**40**, 3, p. 450) Article

C03-068 Design of a Martian Autonomous Rotary-Wing Vehicle. Anubhav Datta, Beatrice Roget, Daniel Griffiths, Gregory Pugliese, Jayanarayanan Sitaraman, Jinsong Bao, Lin Liu, and Oliver Gamard, *University of Maryland* (**40**, 3, p. 461) Article

C03-069 Effect of Leading-Edge Curvature on Airfoil Separation Control. D. Greenblatt and I. Wygnanski, *Tel Aviv University, Israel* (**40**, 3, p. 473) Article

C03-070 Six-Degree-of-Freedom Model of a Controlled Circular Parachute. Vladimir N. Dobrokhodov, Oleg A. Yakimenko, and Christopher J. Junge, *Naval Postgraduate School* (**40**, 3, p. 482) Article based on AIAA Paper 2002-4613

C03-071 Influences of Mounting Angles and Locations on the Effects of Gurney Flaps. Yachen Li, Jinjun Wang, and Panfeng Zhang, *Beijing University of Aeronautics and Astronautics, ROC* (**40**, 3, p. 494) Article

C03-072 Investigation of Factors Affecting Iced-Airfoil Aerodynamics. Sam Lee and Michael B. Bragg, *University of Illinois at Urbana-Champaign* (**40**, 3, p. 499) Article

C03-073 Thrust Generation Caused by Flapping Airfoils in a Biplane Configuration. Ismail H. Tuncer and Mustafa Kaya, *Middle East Technical University, Turkey* (**40**, 3, p. 509) Article

C03-074 Aerooptical Design of a Long-Range Oblique Photography Pod. Yuval Levy, *Technion–Israel Institute of Technology, Israel*; Mark Hornstein, *ELOP Electrooptics Industries, Ltd., Israel*; and David A. Lednicer, *Analytical Methods, Inc.* (**40**, 3, p. 516) Article

C03-075 Integrated Trim and Structural Design Process for Active Aeroelastic Wing Technology. P. Scott Zink, Daniella E. Raveh, and Dimitri N. Mavris, *Georgia Institute of Technology* (**40**, 3, p. 523) Article

C03-076 Dynamic Aeroelastic Response of Aircraft Wings Modeled as Anisotropic Thin-Walled Beams. Zhanming Qin and Liviu Librescu, *Virginia Polytechnic Institute and State University* (**40**, 3, p. 532) Article

C03-077 Three-Dimensional Transonic Aeroelasticity Using Proper Orthogonal Decomposition-Based Reduced-Order Models. Jeffrey P. Thomas, Earl H. Dowell, and Kenneth C. Hall, *Duke University* (**40**, 3, p. 544) Article based on AIAA Paper 2001-0855

C03-078 Analysis of Nonlinear Aeroelastic Signals. H. Alighanbari, *Ryerson University, Canada*; and B. H. K. Lee, *National Research Council, Canada* (**40**, 3, p. 552) Article

C03-079 Aeroelastic Wing with Leading- and Trailing-Edge Control Surfaces. Earl H. Dowell, Donald B. Bliss, and Robert L. Clark, *Duke University* (**40**, 3, p. 559) Article

C03-080 Step-Size Independent Approach for Multidisciplinary Sensitivity Analysis. James C. Newman III, *Mississippi State University*; David L. Whitfield, *University of Tennessee at Chattanooga*; and W. Kyle Anderson, *NASA Langley Research Center* (**40**, 3, p. 566) Article

C03-081 Flight Testing with the Flutterometer. Rick Lind, *University of Florida* (**40**, 3, p. 574) Article

C03-082 Aileron Buzz Simulation Using an Implicit Multiblock Aeroelastic Solver. Guowei Yang and Shigeru Obayashi, *Tohoku University, Japan*; and Jiro Nakamichi, *National Aerospace Laboratory of Japan, Japan* (**40**, 3, p. 580) Article

C03-083 Effect of a Trailing-Edge Jet on Fin Buffeting. S. Phillips, C. Lambert, and I. Gursul, *University of Bath, England, UK* (**40**, 3, p. 590) Article

C03-084 Numerical Biobjective Optimal Design of Airfoil and Wing. Z. Q. Zhu, R. X. Yu, H. Y. Fu, and Y. C. Chen, *Beijing University of Aeronautics and Astronautics, ROC* (**40**, 3, p. 600) Engineering Note

C03-085 Rollup and Near-Field Behavior of a Tip Vortex. D. Birch and T. Lee, *McGill University, Canada*; and F. Mokhtarian and F. Kafyeke, *Bombardier Aerospace, Canada* (**40**, 3, p. 603) Engineering Note

C03-086 Natural-Laminar-Flow Airfoil Development for a Lightweight Business Jet. Michimasa Fujino, Yuichi Yoshizaki, and Yuichi Kawamura, *Honda R&D Americas, Inc.* (**40**, 4, p. 609) Article

C03-087 Simultaneous Optimization of a Multiple-Aircraft Family. Karen Willcox, *Massachusetts Institute of Technology*; and Sean Wakayama, *The Boeing Company* (**40**, 4, p. 616) Article

C03-088 Effect of Midwing Vortex Generators on V-22 Aircraft Forward-Flight Aerodynamics. Tsze C. Tai, *U.S. Naval Surface Warfare Center* (**40**, 4, p. 623) Article based on AIAA Paper 200-0553

C03-089 Stiffness Scaling for Solid-Cloth Parachutes. Hamid Johari and K. J. Desabrais, *Worcester Polytechnic Institute* (**40**, 4, p. 631) Article based on AIAA Paper 2001-2007

C03-090 Predicting In-Flight Aircraft Icing Intensity. Marcia K. Politovich, *National Center for Atmospheric Research* (**40**, 4, p. 639) Article

C03-091 Analytic Prediction of Surface Pressures over a Hemisphere-Cylinder at Incidence. Lance W. Traub and Othon Rediniotis, *Texas A&M University* (**40**, 4, p. 645) Article

C03-092 Numerical Simulation of Inviscid Incompressible Two-Dimensional Airfoil–Vortex Interaction in Ground Effect. Gustavo F. Fonseca and Gustavo C.R. Bodstein, *Federal University of Rio de Janeiro, Brazil*; and Miguel H. Hirata, *Federal University of Itajuba, Brazil* (**40**, 4, p. 653) Article

C03-093 Unsteady Overset Simulation of Rotor-Airframe Interaction. Nathan Hariharan, *United Technology Research Center*; and Lakshmi N. Sankar, *Georgia Institute of Technology* (**40**, 4, p. 662) Article

C03-094 Modeling and Analysis of Helicopter Flight Mechanics in Autorotation. S. S. Houston, *University of Glasgow, Scotland* (**40**, 4, p. 675) Article

C03-095 Nonlinear Random Response of Panels in an Elevated Thermal-Acoustic Environment. Jean-Michel Dhainaut, Xinyun Guo, and Chuh Mei, *Old Dominion University*; and S. Michael Spottswood and Howard F. Wolfe, *U.S. Air Force Research Laboratory/VASS* (**40**, 4, p. 683) Article

C03-096 Boundary Condition for Simulation of Flow Over Porous Surfaces. Neal T. Frink, Daryl L. Bonhaus, Veer N. Vatsa, and Steven X.S. Bauer, *NASA Langley Research Center*; and Ana F. Tinetti, *NCI Information Systems* (**40**, 4, p. 692) Article based on AIAA Paper 2001-2412

C03-097 Correlation Between Vortex Strength and Axial Velocity in a Trailing Vortex. Elgin A. Anderson and Todd A. Lawton, *Utah State University* (**40**, 4, p. 699) Article

C03-098 Stability Analysis of a Tethered Aerostat. Casey Lambert and Meyer Nahon, *McGill University, Canada* (**40**, 4, p. 705) Article

C03-099 Off-Surface Aerodynamic Measurements of a Wing in Ground Effect. Xin Zhang and Jonathan Zerihan, *University of Southampton, England, UK* (**40**, 4, p. 716) Article

C03-100 Active Control of Gimballed Rotors Using Swashplate Actuation During Shipboard Engagement Operations. Jonathan A. Keller and Edward C. Smith, *The Pennsylvania State University* (**40**, 4, p. 726) Article

C03-101 Design Concepts for Adaptive Airfoils with Dynamic Transonic Flow Control. M. Trenker, *DLR German Aerospace Center, Germany* (**40**, 4, p. 734) Article

C03-102 Wing Optimization Using Design of Experiment, Response Surface, and Data Fusion Methods. A. J. Keane, *University of Southampton, England, UK* (**40**, 4, p. 741) Article

C03-103 Effect of Propeller Slipstream on Heat-Exchanger Installations at Low Reynolds Number. Ehab Elsaadawy, *McMaster University, Canada*; and Colin Britcher, *Old Dominon University* (**40**, 4, p. 751) Article based on AIAA Paper 2002-3497

C03-104 Wind Estimation on a Lightweight Vertical-Takeoff-and Landing Uninhabited Vehicle. Nicola de Divitiis, *University of Rome "La Sapienza," Italy* (**40**, 4, p. 759) Article

C03-105 Design of Low Reynolds Number Airfoils with Trips. Ashkok Gopalarathnam, *North Carolina State University*; Benjamin Broughton, Bryan McGranahan, and Michael Selig, *University of Illinois at Urbana–Champaign* (**40**, 4, p. 768) Article based on AIAA Paper 2001-2463

C03-106 Experimental Analysis and Modeling of Limit Cycles In a Dynamic Wind-Tunnel Rig. Paul Davison, Mark Lowenberg, and Mario Bernardo, *University of Bristol, England, UK* (**40**, 4, p. 776) Article

C03-107 Transitional Flow Modeling and Application to High-Lift Multi-Element Airfoil Configurations. Andreas Krumbein, *Deutsche Forschungsanstalt für Luft - und Raumfahrt, Germany* (**40**, 4, p. 786) Article

C03-108 Prediction of Transonic Buffet Onset for Airfoils with Separation Bubble Using Steady Approaches. Injae Chung, *Agency for Defense Development, Korea*; Duckjoo Lee, *Korea Advanced Institute of Science and Technology, Korea*; and Taekyu Reu and Duckkon Ko, *Agency for Defense Development, Korea* (**40**, 4, p. 795) Engineering Note based on AIAA Paper 2002-3146

C03-109 Characteristics of Compressible Concave-Corner Flows. Kung-Ming Chung, *National Cheng Kung University, Taiwan, ROC* (**40**, 4, p. 797) Engineering Note

C03-110 Optimum Downwash Behind Wings in Formation Flight. James W. Frazier and Ashok Gopalarathnam, *North Carolina State University* (**40**, 4, p. 799) Engineering Note

C03-111 Validation of a Wall Interference Correction Procedure in Subsonic Flow. G. Lombardi and M. V. Salvetti, *University of Pisa, Italy*; and M. Morelli, *CSIR, South Africa* (**40**, 4, p. 803) Engineering Note

C03-112 Analytical Prediction of Panel Flutter Using Unsteady Potential Flow. N. Soltani, V. Esfahanian, and H. Haddadpour, *Tehran University, Iran* (**40**, 4, p. 805) Engineering Note

C03-113 Personal Perspective of Aeroelasticity During the Years 1953–1993. John Dugundji, *Massachusetts Institute of Technology* (**40**, 5, p. 809) Article

C03-114 Aeroelasticity Research at Wright-Patterson Air Force Base (Wright Field) from 1953–1993. Terry M. Harris and Lawrence J. Huttsell, *U. S. Air Force Research Laboratory* (**40**, 5, p. 813) Article

C03-115 Transonic Dynamics Tunnel Aeroelastic Testing in Support of Aircraft Development. Stanley R. Cole, Thomas E. Noll, and Boyd Perry, III, *NASA Langley Research Center* (**40**, 5, p. 820) Article

C03-116 Status of Unsteady Aerodynamic Prediction for Flutter of High-Performance Aircraft. Rudy Yurkovich, *The Boeing Company* (**40**, 5, p. 832) Article

C03-117 Computational Aeroelasticity: Success, Progress, Challenge. Davide M. Schuster, *NASA Langley Researach Center*; D. D. Liu, *Arizona State University*; and Lawrence J. Huttsell, *U.S. Air Force Research Laboratory* (**40**, 5, p. 843) Article

C03-118 Nonlinear Aeroelasticity. Earl Dowell, *Duke University*; John Edwards, *NASA Langley Research Center*; nad Thomas Strganac, *Texas A&M Universtiy* (**40**, 5, p. 857) Article

C03-119 Data Summary from the First AIAA Computational Fluid Dynamics Drag Prediction Workshop. David W. Levy and Thomas Zickuhur, *Cessna Aircraft Company*; John Vassberg and Shreekant Agrawal, *The Boeing Company*; and Richard A. Wahls, Shahyar Pirzadeh, and Michael J. Hemsch, *NASA Langley Research Center* (**40**, 5, p. 875) Article

C03-120 Navier–Stokes Simulations for Transport Aircraft Wing/Body High-Lift Configurations. HaiXin Chen and Song Fu, *Tsinghua University, ROC*; and FengWei Li, *Northwestern Polytechnical University, ROC* (**40**, 5, p. 883) Article

C03-121 Comparison of Generalized Approximate Cruise Range Solutions for Turbojet/Fan Aircraft. Mustafa Cavcar and Aydan Cavcar, *Anadolu University, Turkey* (**40**, 5, p. 891) Article

C03-122 Prediction of Tiltrotor Height–Velocity Diagrams Using Optimal Control Theory. Eric B. Carlson, *Bell Helicopter Textron*; and Yiyuan J. Zhao, *University of Minnesota* (**40**, 5, p. 896) Article

C03-123 Joint Strike Fighter Integrated Subsystems Technology, A Demonstration for Industry, by Industry. Alan Burkhard, U.S. Air Force Research Laboratory; and Richard Deitrich, *Joint Strike Fighter Program Office* (**40**, 5, p. 907) Article

C03-124 Component-Based Empirical Model for High-Lift System Noise Prediction. Y. P. Guo, K. J. Yamamoto, and R. W. Stoker, *The Boeing Company* (**40**, 5, p. 915) Article

C03-125 Computational Simulation and Experimental Measurements for a Delta Wing with Periodic Suction and Blowing. Russell M. Cummings, Scott A. Morton, and Stefan G. Siegel, *U.S. Air Force Academy* (**40**, 5, p. 923) Article

C03-126 High-Lift Devices for a Delta Wing Installed Around a Trailing-Edge. Koji Miyaji and Tomoyuki Arasawa, *Yokohama National University, Japan* (**40**, 5, p. 932) Article

C03-127 Rotor-Wake Modeling for Simulation of Helicopter Flight Mechanics in Autorotation. S. S. Houston, *University of Glasgow, Scotland*; and R. E. Brown, *Imperial College, England, UK* (**40**, 5, p. 938) Article

C03-128 Robust Aeroservoelastic Design with Structural Variations and Modeling Uncertainties. Moti Karpel, Boris Moulin, and Moshe Idan, *Technion–Israel Institute of Technology, Israel* (**40**, 5, p. 946) Article

C03-129 Compact Methodology for Computing Limit-Cycle Oscillations in Aeroelasticity. Bogdan I. Epureanu, *University of Michigan*; and Earl H. Dowell, *Duke University* (**40**, 5, p. 955) Article

C03-130 Flight-Test Evaluation of Flutter Prediction Methods. Rick Lind, *University of Florida* (**40**, 5, p. 964) Article

C03-131 Aging Effects on the Interlaminar Shear Strength of High-Performance Composites. Deneen M. Taylor and Kuen Y. Lin, *University of Washington* (**40**, 5, p. 971) Article based on AIAA Paper 2001-1365

C03-132 Dynamic Deformation Measurements of an Aeroelastic Semispan Model. Sharon Suzanne Graves, Alpheus W. Burner, John W. Edwards, and David M. Schuster, *NASA Langley Research Center* (**40**, 5, p. 977) Article based on AIAA Paper 2001-2454

C03-133 Bilevel Design of a Wing Structure Using Response Surfaces. S. A. Ragon and Z. Gürdal, *Virginia Polytechnic Institute and State University*; R. T. Haftka, *University of Florida*; and T. J. Tzong, *The Boeing Company* (**40**, 5, p. 985) Article

C03-134 Active Transparent Stall Control System for Air Vehicles. Mehul P. Patel, *Orbital Research, Inc.*; Carl P. Tilmann, *U.S. Air Force Research Laboratory*; and T. Terry Ng, *University of Toledo* (**40**, 5, p. 993) Engineering Note

C03-135 Navier–Stokes-Based Study into Linearity in Transonic Flow for Flutter Analysis. Roberto G. A. Silva, Olympio A. F. Mello, and Joao L. F. Azevedo, *Centro Técnico Aeroespacial, Brazil* (**40**, 5, p. 997) Engineering Note

C03-136 Advantages of a Bristled Wing as a Rotary Wing. S. Sunada, *Osaka Prefecture University*, Japan; K. Kawachi, *University of Tokyo, Japan*; and K. Yasuda, *Nihon University, Japan* (**40**, 5, p. 1000) Engineering Note

C03-137 Methods for Calculating the Subsonic Aerodynamic Center of Finite Wings. William P. Rodden, *La Canada Flintridge* (**40**, 5, p. 1003) Engineering Note

C03-138 Effects of Parametric Uncertainty on Airfoil Limit Cycle Oscillation. Chris L. Pettit and Philip S. Beran, *U.S. Air Force Research Laboratory* (**40**, 5, p. 1005) Engineering Note

C03-139 Centennial Celebration of the Invention of Aerospace Engineering. Thomas M. Weeks, *Universal Technology Corporation*; and Frank Eastep, *University of Dayton.* (**40**, 6, p. 1009) Article

C03-140 Airplane Aeroelasticity: Practice and Potential. Kumar G. Bhatia, *The Boeing Company* (**40**, 6, p. 1010) Article

C03-141 Rotary Wing Aeroelasticity–A Historical Perspective. Peretz P. Friedmann, *The University of Michigan*; and Dewey H. Hodges, *The Georgia Insitute of Technology* (**40**, 6, p. 1019) Article

C03-142 Aeroelasticity of Nonconventional Airplane Configurations–Past and Future. E. Livine, *University of Washington*; and Terrence A. Weisshaar, *Purdue University* (**40**, 6, p. 1047) Article

C03-143 Future of Airplane Aeroelasticity. Eli Livine, *University of Washington* (**40**, 6, p. 1066) Article

C03-144 Multidisciplinary Design Optimization of a Built-Up Wing Structure with Tip Missile. Seungmoon Jun, *Agency for Defence Development, Korea*; and V. A. Tischler and V. B. Venkayya, *U.S. Air Force Research Laboratory* (**40**, 6, p. 1093) Article

C03-145 Design of Winglets For High-Performance Sailplanes. Mark D. Maughmer, *Pennsylvania State University* (**40**, 6, p. 1099) Article based on AIAA Paper 2001-2406

C03-146 Predicting the Contribution of Running Propellers to Aircraft Stability Derivatives. W. F. Phillips, E. A. Anderson, and Q. J. Kelly, *Utah State University* (**40**, 6, p. 1107) Article based on AIAA Paper 2002-0390

C03-147 Experimental Investigation of Corotating Vortex Filaments in a Water Tunnel. Kamran Rokhsaz and Linda K. Kliment, *Wichita State University* (**40**, 6, p. 1115) Article based on AIAA Paper 2002-3303

C03-148 Calculation of Rotor Blade–Vortex Interaction Airloads Using a Multiple-Trailer Free-Wake Model. Joon W. Lim and Yung H. Yu, *U.S. Army Aviation and Missile Command*; and Wayne Johnosn, *NASA Ames Research Center* (**40**, 6, p. 1123) Article

C03-149 Transonic Cavity-Convex Corner Interactions. Kung-Ming Chung, *National Cheng-Kung University, Taiwan, ROC* (**40**, 6, p. 1131) Article

C03-150 Initial Efforts Toward Identifying Aviation Alerting System Dissonance. Lixia Song and James K. Kuchar, *Massachusetts Institute of Technology* (**40**, 6, p. 1137) Article based on AIAA Paper 2001-4355

C03-151 Vortex Generator Installation Drag on an Airplane Near Its Cruise Condition. Kazuhiro Kusunose and Neng J. Yu, *The Boeing Company* (**40**, 6, p. 1145) Article based on AIAA Paper 2003-0932

C03-152 Simulations of Mesoflap Control for Ramp-Generated Oblique Shock/Boundary-Layer Interactions. S. D. Kim, E. Loth, and J. C. Dutton, *University of Illinois at Urbana-Champaign* (**40**, 6, p. 1152) Article based on AIAA Paper 2002-3117

C03-153 Experimental Frossling Numbers for Ice-Roughened NACA 0012 Airfoils. Nihad Dukhan, *University of Puerto Rico at Mayaguez, Puerto Rico*; Kenneth J. De Witt and K. C. Masiulaniec, *The University of Toledo*; and G. James Van Fossen, Jr., *NASA John H. Glenn Research Center at Lewis Field* (**40**, 6, p. 1161) Article

C03-154 Feasibility Study of Constant Eddy-Viscosity Assumption in Gradient-Based Design Optimization. Chang Sung Kim, Chongram Kim, and Oh Hyun Rho, *Seoul National University, Korea* (**40**, 6, p. 1168) Article based on AIAA Paper 2002-0262

C03-155 Wave-Drag Characteristics of an Over-the-Wing Nacelle Business-Jet Configuration. Michimasa Fujino and Yuichi Kawamura, *Honda R&D Americas, Inc.* (**40**, 6, p. 1177) Article based on AIAA Paper 2003-0933

C03-156 Optimization of a Wing Structure for Gust Response and Aileron Effectiveness. Chris L. Pettit, U.S. Air Force Research Laboratory; and Ramana V. Grandhi, *Wright State University* (**40**, 6, p. 1185) Article

C03-157 Structural Response and Failure of a Full-Scale Stitched Graphite-Epoxy Wing. Dawn C. Jegley and Harold G. Bush, *NASA Langley Research Center*; and Andrew E. Lovejoy, *Analytical Services and Materials, Inc.* (**40**, 6, p. 1190) Article based on AIAA Paper 2001-1334

C03-158 Modeling Thermal Residual Stresses in Composite Patch Repairs During Multitemperature Bonding Cycles. J. Cho and C. T. Sun, *Purdue University* (**40**, 6, p. 1200) Article based on AIAA Paper 2002-1725

C03-159 Computation of Limit Cycle Oscillations of a Delta Wing. Raymond E. Gordnier, *U.S. Air Force Research Laboratory* (**40**, 6, p. 1206) Engineering Note based on AIAA Paper 2002-1411

C03-160 Structural Sizing for Buckling Critical Body Structure of Advanced Aircraft. Mark D. Ardema, *Santa Clara University* (**40**, 6, p. 1208) Engineering Note

C03-161 Roughness Implementation in FENSAP-ICE: Model Calibration and Influence on Ice Shapes. Héloïse Beaugendre, Francois Morency, and Wagdi G. Habashi, *McGill University, Canada*; and Pascal Benquet, *Newmerical Technologies International, Canada* (**40**, 6, p. 1212) Engineering Note based on AIAA Paper 2003-1222
